Navigator International Equity/ADR

Navigate Global Equities with a Disciplined, Research-Backed Approach to Security Selection

With heightened volatility and increased correlations across the international markets, investors seeking global growth may benefit from disciplined, bottom up stock selection. Navigator® International Equity/ADR is a long-only international equity strategy focusing on what we believe to be high quality, undervalued companies, with improving business prospects.

Invest in Undervalued International Companies in Pursuit of Long-Term Goals

Goal: Generate consistent excess returns over a full market cycle.

Investing in companies with sustainable and durable competitive advantages may help investors achieve their desired long-term investment goals. The strategy identifies companies that have low earning variability which we believe demonstrates that they are likely to survive recessions and are likely to thrive on the recoveries that follow.

Utilize a Disciplined, Research-Backed Process to Drive Returns

Goal: Achieve growth by exploiting the three primary factors of equity returns.

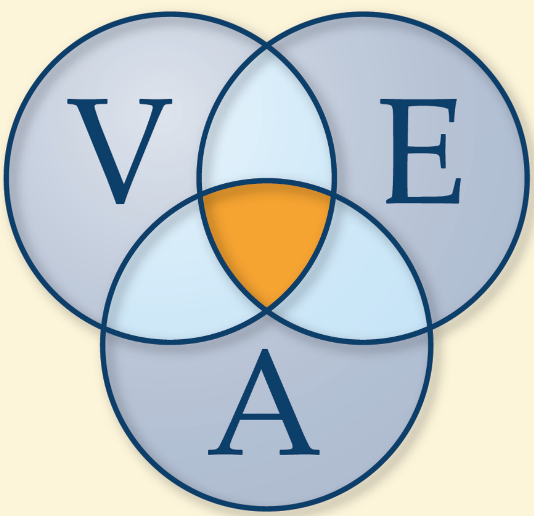
Our proprietary research has shown that three factors influence equity risk and returns: superior anti-fragility (durable competitive advantage), value and improving business prospects. The strategy applies the research in an effort to generate returns in excess of the benchmark.

Participate in Global Growth with Risk Management

Goal: Deliver Long-Term Capital Appreciation.

The strategy seeks to have lower overall portfolio risk, as measured by beta or volatility, compared to its benchmark. While portfolios are subject to economic and earnings risk, the manager seeks to invest in "blue chip" companies — companies with a reputation for anti-fragility, reliability and the ability to operate profitably in good times and bad.

This strategy invests in a broad range of international equities and seeks capital appreciation by focusing on what we view as high quality, undervalued companies with improving business prospects.



Portfolio Philosophy

Based on our extensive research, equity returns are driven by three primary factors:

Anti-Fragility — *Durable Competitive Advantage*
- Does the company have the ability to thrive under changing conditions?

Value — *Companies Trading At a Discount*
- Is the company undervalued based on multiple value metrics?

Earnings — *Improving Business Prospects*
- Does the company exhibit accelerating business momentum?

Objective

Deliver consistent excess returns over broad benchmarks over market cycles.

Past performance not indicative of future results. Returns greater than one year are annualized. Please see attached disclosures. Pure gross returns do not include the deduction of transaction costs, and are shown as supplemental information. The net 3.00% performance is shown because 3.00% is the highest possible industry standard platform fee.

Compliant Presentation (as of 12/31/2019)

Past performance is not indicative of future results. This material is not financial advice or an offer to sell any product. Not every client's account will have these exact characteristics. The actual characteristics with respect to any particular client account will vary based on a number of factors including but not limited to: (i) the size of the account; (ii) investment restrictions applicable to the account, if any; and (iii) market exigencies at the time of investment. Clark Capital Management Group, Inc. reserves the right to modify its current investment strategies and techniques based on changing market dynamics or client needs. The information provided in this report should not be considered a recommendation to purchase or sell any particular security. There is no assurance that any securities discussed herein will remain in an account's portfolio at the time you receive this report or that securities sold have not been repurchased. The securities discussed may not represent an account's entire portfolio and in the aggregate may represent only a small percentage of an account's portfolio holdings. It should not be assumed that any of the securities transactions, holdings or sectors discussed were or will prove to be profitable, or that the investment recommendations or decisions we make in the future will be profitable or will equal the investment performance of the securities discussed herein.

Firm Information: Clark Capital Management Group, Inc. (Clark Capital) is an investment advisor registered with the United States Securities and Exchange Commission under the Investment Advisers Act of 1940, as amended. Registration does not imply a certain level of skill or training. Clark Capital is a closely held, mostly employee-owned C Corporation with all significant owners currently employed by the firm in key management capacities. The firm specializes in managing equity and fixed income portfolios for individuals and institutions. More information about Clark Capital's advisory services and fees can be found in its Form ADV which is available upon request.

Calculation Methodology: Composite returns assume reinvestment of income and other earnings, are gross of withholding taxes, if any, and are reported in U.S. dollars. Net returns presented reflect the deduction of a model investment advisory fee of 3% which is the highest wrap fee charged by any sponsor. Internal dispersion is calculated using the equal-weighted average deviation of annual account returns for those accounts included in the composite for the entire year. Trade date accounting is used. Leverage is not used in the composite. The composites are comprised of all fully discretionary accounts managed in the strategy for one full month, including those accounts no longer with the firm. Closed accounts are included through the completion of the last full month of eligibility. A copy of the complete list and description of Clark Capital's composites, verification and performance examination reports, and policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

Compliant Presentation

3-Year Annualized Ex-post Standard Deviation

Year	Composite	Benchmark
2019	12.03%	11.50%
2018	11.30%	11.54%
2017	11.07%	12.04%
2016	12.11%	12.69%
2015	11.41%	12.30%
2014	10.94%	12.99%
2013	14.36%	16.46%
2012	16.97%	19.53%
2011	19.75%	23.04%

The 3-year annualized ex-post standard deviation measures the variability of the composite and benchmark returns over the preceding 36-month period. It is not required to be presented for periods prior to 2011 or when there are less than 36 monthly composite returns.

Past performance does not guarantee future results. Client account values will fluctuate and may be worth more or less than the amount invested. Clients should not rely solely on this performance or any other performance illustrations when making investment decisions.

Clark Capital claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Clark Capital has been independently verified for the periods January 1, 2002 through December 31, 2019. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. The Navigator International Equity/ADR composite has been examined for the following period (s): 1/1/2013 through 12/31/2019. The verification and performance examination reports are available upon request.

Composite Description: The Navigator International Equity/ADR portfolio primarily invests in American depository receipts (ADRs) of companies with market capitalizations generally falling between $300 million and $250 billion and that are constituents of the MSCI All Country ex US Index. Our investment process is both quantitative and qualitative incorporating proprietary models and analytical techniques that search for companies that possess three characteristics: superior quality, attractive value and improving business prospects. By purchasing the undervalued ADRs of companies with a durable competitive advantage whose businesses have accelerating momentum, we tend to benefit over time as the spread between price and value narrows and as values increase. Our risk controls are sensitive to company and sector diversification to reduce both overall portfolio volatility and tracking error to the benchmark. The goal of the portfolio is to deliver consistent excess returns over a full market cycle at/or below benchmark volatility. The performance results prior to 4/1/2013 were achieved by Anthony Soslow while at his prior firm, using a substantially similar investment style. Anthony Soslow joined Clark Capital Management Group on 3/31/2013.

Composite History: The composite was managed by Global Capital Management, Inc. (Anthony Soslow - manager) from 1/1/2008 to 3/31/2013. From 03/31/2013 to present, the composite is managed by Clark Capital (Anthony Soslow – lead manager). Pure gross results prior to 4/1/13 reflect the deduction of transaction costs.

In January 2016, the 2011 three-year standard deviation for the composite and the benchmark was revised from 16.98% and 19.53%, respectively.

Fee Schedule: The maximum total wrap fee is 3.00%. The total wrap fee includes all charges for trading costs, portfolio management, custody, and other administrative fees. Actual fees may differ from the fees used in this presentation depending upon account size, investments, and agreement with the client.

Benchmark Description: The benchmark is the MSCI All Country World ex USA Total Return (MSCI ACWI), a market capitalization weighted index designed to provide a broad measure of equity-market performance throughout the world. The MSCI ACWI is maintained by Morgan Stanley Capital International, and is comprised of stocks from both developed and emerging markets. Benchmark returns are net of withholding taxes. Index returns reflect the reinvestment of income and other earnings, are provided to represent the investment environment shown, and are not covered by the report of independent verifiers.

The volatility (beta) of the Composite may be greater or less than its respective benchmarks. It is not possible to invest in these indices.

Statistic Descriptions

Standard Deviation: A statistical measure of dispersion about an average which depicts how widely the returns varied over a certain period of time.

3-Year Standard Deviation: The 3-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period.

Beta: A measure of systematic risk with respect to a benchmark. Systematic risk is the tendency of the value of the composite and the value of the benchmark to move together. Beta measures the sensitivity of the composite's excess return (total return minus the risk-free return) with respect to the benchmark's excess return that results from their systematic co-movement. It is the ratio of what the excess return of the composite would be to the excess return of the benchmark if there were no composite-specific sources of return. If beta is greater than one, movements in value of the composite that are associated with movements in the value of the benchmark tend to be amplified. If beta is one, they tend to be the same, and if beta is less than one, they tend to be dampened. If such movements tend to be in opposite directions, beta is negative. Beta is measured as the slope of the regression of the excess return on the composite as the dependent variable and the excess return on the benchmark as the independent variable.

The beta of the market is 1.00 by definition. Morningstar calculates beta by comparing a portfolio's excess return over T-bills to the benchmark's excess return over T-bills, so a beta of 1.10 shows that the portfolio has performed 10% better than its benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the portfolio's excess return is expected to perform 15% worse than the benchmark's excess return during up markets and 15% better during down markets.

Alpha: A measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. A positive alpha figure indicates the portfolio has performed better than its beta would predict. In contrast, a negative alpha indicates the portfolio has underperformed, given the expectations established by beta. Alpha is calculated by taking the excess average monthly return of the investment over the risk free rate and subtracting beta times the excess average monthly return of the benchmark over the risk free rate.

Sharpe Ratio: A risk-adjusted measure developed by Nobel Laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the composite's historical risk-adjusted performance. The Sharpe ratio is calculated for the past 36-month period by dividing a composite's annualized excess returns by the standard deviation of a composite's annualized excess returns. Since this ratio uses standard deviation as its risk measure, it is most appropriately applied when analyzing a composite that is an investor's sole holding. The Sharpe Ratio can be used to compare two composites directly as to how much risk a composite had to bear to earn excess return over the risk-free rate.

R-Squared: Reflects the percentage of a portfolio's movements that can be explained by movements in its benchmark.

Downside Capture Ratio: Measures a manager's performance in down-markets. A down-market is defined as those periods (months or quarters) in which market return is less than 0. In essence, it tells you what percentage of the down-market was captured by the manager. For example, if the ratio is 110%, the manager has captured 110% of the down-market and therefore underperformed the market on the downside.

Upside Capture Ratio: Measures a manager's performance in up markets relative to the market (benchmark) itself. It is calculated by taking the security's upside capture return and dividing it by the benchmark's upside capture return.

Bull Beta: A measure of the sensitivity of a composite's return to positive changes in its benchmark's return.

Bear Beta: A measure of the sensitivity of a composite's return to negative changes in its benchmark's return.

Best Month: The highest monthly return of the investment since its inception or for as long as data is available.

Worst Month: The lowest monthly return of the investment since its inception or for as long as data is available.

Maximum Gain: The peak to trough incline during a specific record period of an investment or composite. It is usually quoted as the percentage between the peak to the trough.

Maximum Drawdown: The peak to trough decline during a specific record period of an investment or composite. It is usually quoted as the percentage between the peak to the trough.
