## Top Contributors as of September 30, 2021

Company Name	Avg. Weight (%)	Contribution to Return (%)
Perficient, Inc.	2.32	0.80
Hill-Rom Holdings, Inc.	2.35	0.64
Advansix, Inc.	1.86	0.52

## Top Detractors as of September 30, 2021

Company Name	Avg. Weight (%)	Contribution to Return (%)
Guess?, Inc.	1.90	-0.38
Advanced Energy Industries, Inc.	0.68	-0.34
America's Car-Mart, Inc.	1.87	-0.33

Source: Factset. For illustrative purposes only. Past performance does not guarantee future results. The holdings identified do not represent all of the securities purchased, sold or recommended for advisory clients. In the chart above, "weight" is the average percentage weight of the holding during the period, and "contribution" is the contribution to overall performance during the period. To obtain the calculation methodology and a list showing every holding's contribution to the overall composite during the period, contact: PortfolioAnalytics@ccmg.com.

## Transitioning, Not Transitory

## Market Review

While last quarter's commentary dissected inflation's transitory and permanent components (while stressing the significance of permanent labor cost gains derived from labor supply shortages), this quarter, we focus on monetary policy action potentially TRANSITIONING from a TRANSITORY regime of excess liquidity.

For the better part of 50 years from 1960-2009, the Fed Fund's Rate (FF), or the inter-bank collateralized lending rate, primarily sat above the yearly inflation rate as depicted by the annual change in Personal Consumption Expenditures Deflator (PCE). The Fed's primary monetary policy tool was nearly always above the inflation rate (FF>PCE) such that the real interest rate was permanently positive except for those periods of recession induced extreme expansionary monetary easing. Policy, however, has reversed dramatically since the 2008-2009 Great Financial Crisis. For the last 13 years, FF has rested below the PCE, creating a negative real interest rate to stimulate borrowing and lending to drive inflation to the magical (and arbitrary) 2.00% Fed objective. With negative real rates at a record -4.2% (0.1%-4.3%), something must give.

## It's Called Duration

I have often described equity market performance as growth-focused or value-driven or risk-on. Often, this description over-simplifies equity market performance attribution. For the 10-year period ending 2020, for instance, we and other market analysts describe that period as a large-cap growth market because the Russell Large Cap Growth Index outperformed value or Russell 2000 small-caps by 7% and 6%, respectively.

While it is true that growth outperformed value during this period, not all the excess return can be attributed to the revenue or earnings growth differences of each index's subcomponents. I believe some portion (maybe a third) can be attributed to the timing of the expected cash flows and how assets with different average time-weighted cash flows respond to changes in interest rates.

In bond parlance, the measure of time of weighted average cash flow is called duration. Again, to slothfully oversimplify, value stocks like Utilities and cyclicals tend to have a larger portion of their weighted average cash flows (think earnings and dividends) in the near future while growth stocks with higher P/E ratios have a greater portion of their expected future cash flows into the far future.

As inflation and interest rates have largely declined since 2008, companies with a greater portion of their expected future cash flows into the far future (high duration stocks) have outperformed. It's math. Per the "transitioning" paragraph above, we must be mindful that math works both ways and if Fed policy becomes more restrictive, short duration stocks should become relatively more attractive.

## Third Quarter Performance Highlights

- For the third quarter of 2021, the strategy had a gain of 0.46% gross (-0.29% net) vs a -4.36% loss for the Russell 2000 Index.
- Year to date, the strategy has gained 24.36% gross (21.65% net) vs. 12.41% gains for the Russell 2000 Index.
- Positioning in Financials and Information Technology helped relative performance while positioning in Industrials and Real Estate sectors acted as a drag.
- Our holdings such as Perficient and Hill-Rom Holdings helped performance in the quarter as positions in Guess? and Advanced Energy Industries hurt performance.

## Positioning and Outlook

Value, small-caps, and international equity declined in the third quarter as an increase in COVID (primarily the Delta variant) cases suppressed economic growth, earnings expectations and prolonged supply and labor shortages. During the quarter, we have attempted to balance our growth and value exposure while reducing portfolio risk and tracking error.

Like our other portfolios, our Navigator® Small-cap portfolio attempted to balance growth and value buys during the quarter while removing companies which have demonstrated an inability to manage rising costs. We added to Energy, Real Estate and Financials reducing positions in Consumer Durables and Industrials. Looking forward, we anticipate a change to a less expansionary/stimulative monetary policy. We believe this change will relatively threaten fragile and high duration companies.
