## A Distinction Without a Difference

## Market Review

Call it a recession – two negative GDP quarters – or just slower economic growth and declining earnings expectations, equity markets indifferently reversed May's gains in June pushing the S&P 500 to its worst first half start since 1970 – declining 19.97%. The bear market continued to feed on the headwinds of high inflation, the Fed's response to it, and early signs of a negative earnings revision cycle.

Coordinated Central Bank tightening was highlighted by the U.S. Fed's surprise lifting of the federal funds rate from 0.75% to 1.50% with further indications of continued neutralization of monetary policy tightening until short term rates approach either current inflation (Consumer Price Index (CPI) +8.6% year-over-year May) or intermediate term inflation expectations (down to just 2.62% as of June 30, 2022). Just as the gap between the federal fund's rate and inflation at the beginning of the year produced a shockingly wide negative real interest rate, implying a forthcoming Fed tightening cycle, the current wide gap between current inflation and inflation expectations indicates that the accumulated total of 1.50% of rate hikes plus anticipated higher federal funds rates has accomplished much of the needed tightening of monetary policy to both reduce economic growth and contain inflation expectations. 10-year Treasury yields have responded to both – declining 0.60% to 2.87%, producing a flat yield curve to both 2-year notes and 1-year bills.

## Second Quarter Performance Highlights

- For the second quarter of 2022, the Navigator® All Cap strategy had a return of -14.54% gross (-15.22% net) vs. a 16.70% loss in the Russell 3000 index.
- For the five years ending June 30, 2022, All Cap gained 5.41% gross on an annualized basis (2.30% net) vs. 10.60% for the Russell 3000.
- Our positioning in Consumer Discretionary and Healthcare helped relative performance while our positioning in Communication Services and Consumer Staples acted as a drag.
- Portfolio holdings in Dollar General and Merck helped relative performance while holdings in Apple and Alphabet (Google) hurt performance.
- During the quarter, the strategy was positioned approximately 67% in large-cap companies with the balance in small-cap/mid-cap companies and cash.

## Positioning and Outlook

Portfolios began the quarter well positioned for rising corporate finance rates, a consumer constrained by higher food and energy costs, and continued Fed tightening. Our focus on more antifragile companies helped portfolios decline less than their benchmarks apart from our ADR/International Equity portfolio, which suffered due to its highly underweight position in an outperforming China.

*Past performance is not indicative of future results.  
This is not a recommendation to buy or sell a particular security. Please see attached disclosures.*

While we continue to anticipate additional Fed tightening, slower economic growth, and growing inventories, the large price declines in many sectors of the market combined with lower inflation expectations give us growing confidence that equity investors should expect typical equity market cycle returns from this point forward. P/E ratios for our Small Cap, SMID Cap and ADR/International Equity strategies near 13 and thus offer earnings yields – a historically important component of long-term returns – of over 7.5%. As upward

changes in finance rates tends to hurt both high duration and fragile companies the most, and we don't know the precise end and impact of Fed tightening, we are continuing to prefer companies with more consistent and less cyclical cashflows.

The volatility (beta) of a client's portfolio may be greater or less than its respective benchmark. It is not possible to invest in these indices. The securities of

mid-cap companies may be subject to more abrupt or erratic market movements and may have lower trading volumes.

The S&P 500 measures the performance of the 500 leading companies in leading industries of the U.S. economy, capturing 75% of U.S. equities. Index returns include the reinvestment of income and dividends. The returns for these unmanaged indexes do not include any transaction costs, management fees or other costs. It is not possible to make an investment directly in any index.

The 10-year Treasury yield is the yield that the government pays investors that purchase the specific security. Purchase of the 10-year note is essentially a loan made to the U.S. government.

The price-to-earnings ratio is the ratio for valuing a company that measures its current share price relative to its earnings per share (EPS). The price-to-earnings ratio is also sometimes known as the price multiple or the earnings multiple.

The "Consumer Price Index for All Urban Consumers: All Items Less Food & Energy" is an aggregate of prices paid by urban consumers for a typical basket of goods, excluding food and energy.
